

2026 Federal Tax Estimate

Personal reference notes compiled from the 13 September 2026 review. Prepared for Vasu Pulickal S and Nisha S Valiparambil. Not a tax return, 1099, or CPA opinion.

ESTIMATED 2026 FEDERAL TAX (INCOME TAX + NIIT)

~\$66,900

Assumes 2026 W-2 wages stay near 2025's \$225,814, Robinhood realized gain stays near \$266,459, and the 2025 capital-loss carryover of \$126,552 is applied. Texas state income tax: \$0. If paycheck withholding stays near last year's \$22,601, about \$44,300 still needs to be funded by extra withholding, estimates, or a balance-due payment.

Read this first. These figures are an estimate from Robinhood realized P&L (as of 13 Sep 2026), the 2025 Form 1040 PDF, and Daily Tracker cash/book notes. They are not tax advice. The IRS will use Form 1099-B / 1099s, W-2s, and the filed return. Open MRNA is unrealized and not in the \$266,459. More trades after 13 Sep change the number.

1. What is taxable right now

- **Taxable:** realized short-term stock and equity-option gains. HOOD / MRVL / MRNA / SKHY-style trades are ordinary income, not 15% long-term capital gain.
- **Not taxable yet:** open 3,000 MRNA @ \$147.08 (about -\$7,300 to -\$9,400 vs Friday 11 Sep). Taxable only when sold.
- **Not income:** transfers out of Individual (including Friday 11 Sep's \$28,690.94). Deposits and withdrawals move cash; they do not create gain.
- Daily Tracker book change (~+\$197,000 excl. flows since 28 Jun) is mark-to-market, not the 1099 number.

2. Robinhood realized P&L (2026 YTD through 13 Sep)

Pulled live after Agentic MCP login. Individual brokerage3370.

Sleeve	Realized
Options	+\$223,003
Equity	+\$43,245
Individual total	+\$266,459
Agentic + Ammu + Managed (combined)	~+\$525

CSV through 31 Aug only had been a weaker proxy (stock FIFO ~+\$224,600 + options cash ~+\$188,400). September flattening sits after that file. Use Robinhood's \$266,459.

3. 2025 return — the ~\$120,000 “loss”

That amount is a **capital-loss carryover**, not a leftover W-2 loss. 2025 W-2 wages were income.

2025 joint return item	Amount
Filing status	Married filing jointly
Residence	McKinney, TX (no state income tax)
W-2 wages (Evernorth ~\$178,709 + spouse ~\$47,105)	\$225,814
Schedule D net capital loss	(\$129,552)
Allowed against ordinary income in 2025	(\$3,000)
Capital-loss carryover into 2026	\$126,552
of which short-term / long-term (approx.)	\$116,898 / \$9,654
2025 taxable income	\$191,416
2025 federal tax	\$29,239
2025 federal withholding	\$22,601
2025 balance due (plus \$172 estimate penalty)	\$6,810
2025 marginal / effective rate	22% / 16.69%

- The carryover offsets **2026 capital gains** dollar-for-dollar.
- It does **not** wipe 2026 W-2 wages.
- Unused 2025 bracket space and the 2025 standard deduction do **not** carry forward.
- Schedule 1 showed no NOL / business-loss carryforward.

4. 2026 taxable leftover gain

	Amount
Robinhood realized YTD	\$266,459
2025 capital-loss carryover	-\$126,552
Taxable remaining gain	\$139,907

Only gains *after* the carryover are taxable trading income. That leftover ~\$140k plus this year's W-2 are both taxable.

5. Federal tax computation (2026 MFJ)

2026 standard deduction \$32,200. Ordinary brackets used: 10% to \$24,800; 12% to \$100,800; 22% to \$211,400; 24% to \$403,550. Child/other-dependent credit kept at the 2025 pattern (\$2,200 + \$500 = \$2,700). NIIT is 3.8% of the lesser of net investment income or MAGI over \$250,000 MFJ.

	Amount
W-2 (if same as 2025)	\$225,814
Net taxable ST gain	\$139,907
AGI	~\$365,721
Standard deduction	-\$32,200
Taxable income	~\$333,521
Income tax before credits	~\$65,241
Child / other dependent credit	-\$2,700
Income tax after credits	~\$62,541
NIIT (MAGI – \$250,000 = \$115,721 × 3.8%)	~\$4,397
Estimated federal tax	~\$66,900
Texas state income tax	\$0

What that \$67k is made of

Situation	Federal
Wages only (no 2026 trading gain)	~\$29,300 (like 2025)
Extra tax on the leftover \$139,907	~\$37,600
Combined	~\$66,900
Same year <i>without</i> the \$126,552 carryover	~\$106,600
Carryover tax savings	~\$40,000

6. What still has to be paid

~\$66,900 is total 2026 federal tax, not a leftover after paychecks.

	Amount
Estimated federal tax	\$66,900
If W-2 withholding stays near 2025	-\$22,601

	Amount
Still to fund	~\$44,300

- Cover that gap with extra withholding, quarterly estimates, and/or a balance-due payment with the 2026 return (filed in 2027).
- Q3 estimated tax was due **15 September 2026**.
- 110% safe harbor on 2025 tax (\$29,239) is only **~\$32,200**. Last year's withholding pace (~\$22,600) is short of that safe harbor.
- Selling MRNA at Friday's mark would drop federal tax by roughly **\$2,000**. More realized gains after 13 Sep raise it.

7. Earlier ranges (before the 2025 PDF and live P&L)

Kept only so this file matches the chat. Prefer sections 2–6.

Earlier take	Why it was replaced
App 1040 parser (~wages \$457, tax – \$2025)	It read form line numbers as dollars. Ignore.
Tracker excl.-flows ~\$197k since 28 Jun	Book P&L, includes unrealized MRNA, misses earlier 2026 closes.
CSV through 31 Aug ~\$413k closed lots	Stale; no September; not Robinhood's realized total.
Flat 22% on \$197k or \$266k	App projection only. Joint W-2 + NIIT put leftover gains in 24%.
~\$42k if trading were almost all 2026 income	False once 2025 W-2 (~\$226k) is included.

8. Tracker context (not the tax base)

- Individual scheduled book: 28 Jun \$78,198.72 → 12 Sep \$234,067.84.
- Net withdrawals since 28 Jun: \$41,345.30. Economic P&L excl. flows ~+\$197,214, of which MRNA ~–\$7,300 is unrealized.
- 11 Sep Individual close: 3,000 MRNA, cash about –\$199,874. Friday transfers \$28,690.94 were missing from the frozen snapshot until logged in cash I/O; excl. flows that day is about +\$20,019, not the raw –\$8,672 tile.

Compiled 13 September 2026 from the in-app tax thread, Robinhood realized P&L, and the 2025 Form 1040 PDF. SSNs, bank accounts, and full brokerage numbers are omitted. Recalculate after year-end 1099s, final W-2s, and any trades after this date.
